

Fictional Valve Inspection Matrix

The paragraph beside the matrix explains how table-adjacent selection should behave. Capturing it must not pull unrelated cells into the selected text.

Part	Observed state	Fictional follow-up
Inlet flap	Moves freely	Record the observation
Clear chamber	No trapped bubble	Continue the demonstration
Return hose	Gentle curve	Keep the route unchanged
Drain plug	Seated	Leave closed during the test

The stable table target is the phrase Clear chamber followed by No trapped bubble in the same logical row.
